PERMISSION TO QUOTE

This is an annual progress report that may contain information that is subject to future modification or revision. Persons wishing to quote from this report, for reproduction or reference, should first obtain permission from the Chief of the Wildlife Section, Kansas Department of Wildlife and Parks, 512 SE 25th Avenue, Pratt, KS 67124.

EQUAL OPPORTUNITY STATEMENT

This program receives Federal financial assistance from the U. S. Fish and Wildlife Service. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972, the U. S. Department of the Interior and its bureaus prohibit discrimination on the basis of race, color, national origin, age, disability or sex (in educational programs). If you believe that you have been discriminated against in any program, activity or facility, or if you desire further information, please write to:

SMALL GAME HUNTER ACTIVITY SURVEY - 2011

Objective: Estimate statewide hunter activity and harvest parameters for Kansas' major small game species.

Procedure: A random sample of 14,904 (10% of all license types that allowed small game hunting) Kansas resident and 6,727 non-resident 2011 hunting, combination, and lifetime license holders was selected from all Kansas counties using the electronic Kansas Outdoors Automated Licensing System (KOALS). The following are not required to have a hunting license: 1) owners of land or tenants of land leased for agriculture, and immediate family members living with resident landowners and resident or non-resident tenants, while hunting on this land, 2) residents 15 and younger or 65 and older. These exemptions were not included in the sampling effort for this survey. Each licensed individual was notified by postcard in February 2012 of their selection for the survey and asked to complete an on-line questionnaire of their hunting activity for the 2011-2012 seasons. After comparing paper responses and electronic responses for 2010 data, and seeing no differences, the 2011 survey was completed entirely by electronic means, therefore no paper survey was offered this year. After approximately 5 weeks, non-respondents were mailed a second postcard notification requesting their participation in this survey.

To achieve hunter and harvest estimates we used answers from respondents to estimate percentage of active small game hunter for all license holders for the 2011-2012 small game seasons. From this pool we then calculated the percentage of individual species hunted. Then we extrapolated the active small game hunter percentage and their species specific hunting/harvest information to total license holders. This provided estimates of total hunters, hunter effort, and bag for all species.

We attempted to estimate prairie chicken harvest by species (Greater and Lesser Prairie Chicken). Sympatric range occurs in west-central and north-west Kansas and regulations overlap between the two species. Historically, harvest was delineated by county for the dominant species by county. This procedure was continued for this survey to preserve continuity in the data while anticipating improvements for next year's harvest survey. Lesser Prairie Chicken data were taken from the following counties (all other counties denoted data for Greater Prairie Chickens): Hodgeman, Hamilton, Haskell, Pratt, Seward, Barber, Pawnee, Kearney, Stanton, Edwards, Stevens, Comanche, Gray, Kiowa, Meade, Grant, Finney, Ford, Morton, Greeley, Wichita, Scott, Lane, Rush, Stafford. Many of these areas are strictly Lesser Prairie Chicken range, however parts of northern counties other than those reported above do include some Greater Prairie Chicken range. Our estimate of Lesser Prairie Chicken harvest does not include data from many counties north of the Arkansas River that are now occupied primarily by Lesser Prairie Chicken (but not at the time the survey was initiated). Next year (2012-2013 season) we will implement a prairie chicken permit (required for all prairie chicken hunters) which will allow us to survey all prairie chicken hunters and provide more precise estimates. Moreover, lek counts can be used to extrapolate species specific percentages in those counties with sympatric range in west-central and north-central Kansas.

Results: From the 21,631 deliverable notifications, 5,260 usable responses were obtained for an overall response rate of 24%. These included 3,055 responses from resident hunters, and 2,205 responses from non-resident hunters. Of these, 2,951 indicated hunting small game during the 2011-2012 seasons.

A summary of historic small game hunting season regulations follows.

Table 1. Historic small game regulations, Kansas, 1957-2011.

^a Hunter estimates prior to 1962 were not adjusted for inactive license buyers.

^b Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days.

ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

^c Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.

^d Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

Kansas Bobwhite Harvest, 1957 - 2011.

Table 3. Estimated annual **BOBWHITE** hunting activity in Kansas.

Year	Percent Hunting Species	Est. Total Hunters	Est. Total Days	Est. Total Harvest	Season Days Per Hunter	Season Bag Per Hunter	Avg. Bag Per Day

^a Hunter estimates prior to 1962 were not adjusted for inactive license buyers.

^b Average Bag Per Day through 1979 expresses overall mean season bag divided by overall mean season days.

ABPD after 1979 is the mean of individual hunter ratios of season bag to season days.

^c Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.

^d Values from 1989 forward include both regular (November opening to Jan. 31) and special early (9/15-10/15) season.

^e Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

Kansas Lesser Prairie Chicken Harvest, 1975 - 2011.

Table 6. Estimated annual **LESSER PRAIRIE CHICKEN** hunting activity in Kansas ^a.

Year	Percent Hunting Species	Est. Total Hunters	Est. Total Days	Est. Total Harvest	Season Days Per Hunter	Season Bag Per Hunter	Avg. Bag Per Day

^a Hunter estimates prior to 1962 were not adjusted for inactive license buyers.

^b Average Bag Per Day through 1967 expresses overall mean season bag divided by overall mean season days. ABPD after 1967 is the mean of individual hunter ratios of season bag to season days.

^c Percent of active hunters hunting species unobtainable due to 1979 questionnaire error. Value is 1974-1978 mean.

^d Season was extended 2 months to run from June 1 through the end of February.

^e Electronic licensing permitted random sampling of non-residents for the 1st time, improving how estimates were calculated.

Kansas small game regions for all species

^a Hunters reporting some small game activity. Values from 1980-2005 are for Resident hunters only.

^b From the 1995 start of the statewide Walk-In-Hunting Area (WIHA) program, the question indicated hunters should not include WIHA as public land. However, inclusion of WIHA does occur to an unknown degree.

^c Electronic licensing permitted random sampling of Non-Residents for the 1st time. Values after 2005 are weighted means of both Resident and Non-Resident hunters.

Table 20. Number and percent of non-residents respondents by state of residence
2011 - 2012.

State	Number	Percent	State	Number	Percent
