District News: Fish Stocking Schedule

Jessica Mounts, District Fisheries Biologist

Kansas Department of Wildlife, Parks and Tourism

Channel Catfish have already been stocked this month in several Wichita locations. Watson Park, Emery Park, K-96 Lake, South Lake and Lake Afton received several hundred pounds of adult channel catfish last week, with the rest of the Wichita area lakes and ponds planned for stocking soon. The lakes will receive monthly stockings from March – September, and a more specific stocking schedule will be available soon. For timely updates and fishing reports, check out each lake at www.fishwichita.org.

Other species of fish such as bluegill, wiper and saugeye are also stocked across the city in various locations. Crappie fishing is fair to good at the KDOT Lakes and K-96 lake. Largemouth Bass can be caught across the city as well, especially at Sedgwick County Park.

Fishing Q&A

Q: What are the best online resources to get up-to-date fishing information?

A: Many agencies and anglers are turning to social media to stay in touch. The benefits of being able to post immediate and timely updates can sometimes make us forget that part of the fun in fishing is going for the sake of figuring it out on our own. While Facebook, Twitter and the Weekly Fishing Reports are great ways to find general information about stocking schedules and what's biting, depending too heavily on the internet or a "bad" fishing report might keep you from the catch of a lifetime!

KDWPT provides the annual [Fishing Forecast](#), which is a good place to start. From there, you can learn about fishing, hunting, boating and more on our [YouTube Channel](#). Seasonal updates and breaking news are posted on our [Twitter feed](#) and [Facebook page](#). Additionally, many of our wildlife areas and state parks now provide specific information via Facebook pages. Our newest page provides a lot of great information about the fisheries in northeast Kansas, and I'm sure there will be more to come.

The bottom line – use the information for what it's worth, but don't depend entirely on technology. There's still excitement in just getting out there and experiencing it all for yourself without the filter of a computer screen. <'><

*Agencies are turning to
facebook, twitter and
blogging to stay in
touch with anglers.*

Species Profile: White Bass

White Bass
(*Morone chrysops*)

The white bass is a freshwater fish in the temperate bass family Moronidae (mo-ron'-i-de). This family of fish has small scales and long, sharp spines on their fins, and includes striped bass, wipers and white perch.

White bass are very active in the spring during their spawn, when schools of fish swim upstream in the upper ends of Kansas reservoirs. Once the young hatch, they grow very quickly – sometimes up to 8 inches in one year!

White bass usually don't live longer than about 3-4 years, so fast growth is a necessity to their survival.

White bass usually feed at the surface of the water on smaller fish (especially shad), crustaceans and insects. In Kansas, anglers have the best luck fishing for white bass during the spring spawn as they move upstream, or in the fall as the schools of fish are chasing after schools of shad. The best methods to catch white bass use a lure that mimics a small shad, but they can also be caught on a jig/worm combination. <'><

Hook, Line and Sinker

New publication will feature the "Wet and Wild" creatures of Kansas.

Kansas Critters: Wet and Wild is the fourth in a series of books published by the Great Plains Nature Center in Wichita featuring art and literature entries created by Kansas kids in grades K-8. The deadline for entries has passed, and the book is now in production!

This book will focus on 27 wetland critters found in Kansas, including: green-winged teal, plains minnow, channel catfish, diamondback water snake, common snapping turtle, bullfrog, maple leaf mussel, Graham's crayfish snake, beaver, white-fronted goose, bluegill, Topeka shiner, great blue heron, painted turtle, plains leopard frog, floater mussel, Halloween pennant dragonfly, mink, mallard, orangethroat darter, largemouth bass, American avocet, red-eared slider, kingfisher, northern crayfish and black-crowned night heron.

Other books in the series have been *Kansas Critters: Bugs*, *Kansas Critters: Mammals* and *Kansas Critters: Birds*. This project is made possible by generous contributions from the Lattner Family Foundation, Cargill Cares, the Kansas Health Foundation and the Wichita Cultural Funding Committee.
