

MAINTENANCE:

- Burn approximately one-third of the managed area annually. This provides a continuous source of cover and nesting habitat.
- If burning one-third of a field is not feasible, then burning should take place no more than once every 3 years.
- Maintain firebreaks according to the burn plan. (Figure 2.)

Figure 1. Summer burn conducted mid-July and regrowth 2 months after burn.

Figure 2. Mowed firebreak.
